

# EL TORBELLINO

NEWSLETTER OF SAN DIEGO ORBITEERS FREE FLIGHT CLUB

January 2018

## ***The Prez's Corner - Don Bartick***

Happy New Year to all out there in Orbiteer land. Much is going on as the year gets started. We had our first Indoor competition. The club's inaugural P-18 event had 5 entries. For those that are not familiar with the event, it's an entry level to indoor rubber powered free flight. It's a take-off from the specifications created for last year's Science Olympiad Wright Stuff event held for Middle School students. The planes are available in kit form or you can design your own. Not difficult to build and fun to fly. Kim came out the winner with flights above 2 minutes. I came in second with flights over 2 minutes, but not as good as Kim. The specifications were published in last month's ET. It is also a provisional AMA event this year. Likewise for the Orbiteers. Therefore, no points will be tallied for the Indoor Championship award.

Talking about Science Olympiad, I'm once again coaching teams from Olive Perice Middle school here in Ramona. They are entering 4 teams in the Wright Stuff competition. As such, I have been coaching 8 students to build and fly a plane that I designed to SO 2018 specifications. Each student is responsible for building their own plane. They will each fly their plane in competitions in teams of 2. Each team is responsibility for making 2 official flights. The best time will be used. Over 50 schools will be competing. Several Orbiteers, such as John Hutchison and Mike Jester have coached in the past. Both Middle and High schools that have Science Olympiad programs are in need of coaches. So, if any of you are interested, please contact your local schools.

As I write this column, we are in Arizona visiting relatives. This is our precursor to attending the SW Regionals held in Eloy on the 13<sup>th</sup>, 14<sup>th</sup> and 15<sup>th</sup>. This is the umpteenth year for this competition, but the first year without Al Lidberg at the helm. He passed away last year. His son Chris has taken over for him. The contest is for all aspects of outdoor free flight. Events for SAM, AMA, Nostalgia, FAI and FAC are contested. It is also a National Cup and America Cup event.

The joint Orbiteers and Scale Staffel Award Banquet is this month. I'm sure Howard will have a flyer in this month's ET. As always, expect good food, good comradery and wonderful drawing prizes. The 2 clubs are subsidizing the meal expense so there is no excuse for not attending. Plus we need you.

I would like to thank Mark Chomyn for his years of service as our Contest Coordinator and organizer of the annual Awards banquet. Mark requested that another member(s) take over these responsibilities. Mike Pekelny volunteered to take over as Contest Coordinator, Mike Jester will support Mike by managing the contest points. Linda Piazza volunteered to take on the Awards banquet and any other social activities that may arise. Her promotional flyer placed in the Hobby Shops and Miramar Air Museum has attracted new membership which is a good thing. Thank you Linda. A special thanks to Kathy McLaughlin for being our Webmaster and Arline Bartick for the action photos taken at the indoor and outdoor contests.

This is a wrap for now.

Remember: "Simplicity is the ultimate sophistication"

## P-18 Event - Follow Up

By Mike Jester

Please note that last month's edition of this newsletter inadvertently included a superseded version of the P-18 rules. The final rules are reproduced below. The key difference is that the superseded rules provide that the propeller "shall be an unmodified commercially available unit with a maximum diameter of 6 inches." The final rules provide that the propeller - - shall be an unmodified commercially available **plastic prop** with a nominally maximum diameter of 6". If the propeller is advertised as being a 6" unit, it is acceptable for this event. - -. (emphasis added) There will be a P-18 contest the first Sunday of every month at the Grossmont Junior College gym, starting January 7, 2018.

### **25. P-18 Provisional (for event 227)**

#### **25.1. General**

Except for the specific rules that apply to this event, the rules for free flight rubber hand launched stick shall apply.

#### **25.2.**

The model shall be a rubber powered monoplane covered with either tissue or plastic shopping bag material.

#### **25.3.**

The wing shall not exceed 4.5 inch chord and projected span of 18 inches. Horizontal stabilizer shall not exceed maximum span of 9 inches with a maximum chord of 3.5 inches. Maximum overall length, including the propeller shall not exceed 18 inches.

#### **25.4.**

The propeller shall be an unmodified commercially available plastic prop with a nominally maximum diameter of 6". If the propeller is advertised as being a 6" unit, it is acceptable for this event. Weight may be added for balancing.

#### **25.5.**

The maximum hook to hook distance shall not exceed 10 inches.

#### **25.6.**

The minimum weight of the completed model, less rubber, shall be 7.5 grams.

**P-18 Discussion**

**Photo by Arline Bartick**

## Pop-Off Wing DT for P-30 - Follow Up

By Mike Jester

In my article on this subject that was published in last month's edition of this newsletter I included a 2006 diagram that seemed to attribute the design to Don DeLoach. Mike Pykelny forwarded a similar description and diagram reproduced hereafter which was published in 2004. This is circumstantial evidence indicating that the design may have been conceived by Larry Bagalini, a long-time San Diego free flight enthusiast. I extend my apologies to Larry for the apparent error in attribution.

### A Pop-off Wing DT for P-30's

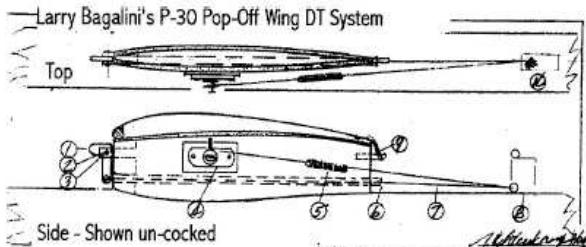

by Larry Bagalini

*Published in the October 2004 issue of the "Scale Staffel," Gerald Sullivan, Editor*

The following was a hand out at the recent Orbiteers general meeting. It was drawn up by John Oldenkamp. The identified parts go a long way to showing how the device is made. Not shown is the line from a wing tip to the rear of the fuselage. A fishing swivel must be placed in this line.

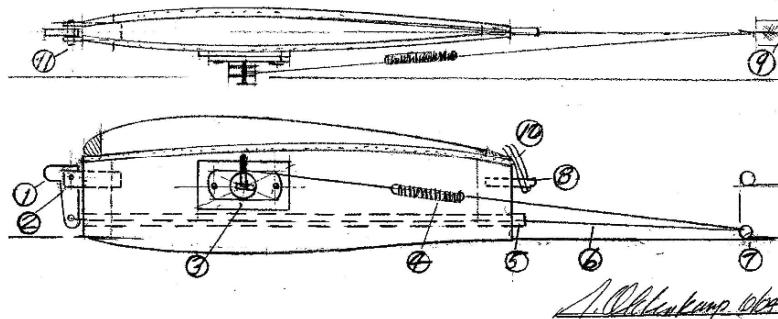

1. Bell crank. Make from thin plastic, aluminum, or ply.
2. 1/8" i.d. aluminum tube. Drill 1/32, then file slot for axle.
3. Bell crank axle. # 90 nylon bolt, paper clip, or thin tubing.
4. Viscous Timer. Badger, Flite Tech or FAI Czech, Buddenbohm, etc.
5. Small stainless steel spring. Some ballpoint pen springs work well.
6. Plastic small diameter cocktail straw runs through pylon.
7. Spider wire lanyard. From WalMart fishing department or 10# monofilament.
8. .020 or .015 inch closed loop music wire turnaround.
9. Wing held down with 2 #10 bands tied together.
10. .5 or .75 oz. glass clothe over turnaround. Attach with CyA glue.

(Larry ties the bands to the peg at illustration 9 to keep from losing the bands.)

### EL TORBELLINO OCTOBER 2004 - H.Haupt

For more information about the Larry Bagalini's P-30 pop-off wing DT design, John Oldenkamp profiled the device in his Borderline column in the El Torbellino, October 2004. A copy of this Borderline column is attached to the same email that brought you this newsletter.

**JANUARY INDOOR MONTHLY 2018**  
**(January 7, 2018)**  
**Completion Scorer: Mike Jester**

**P-18:**

(Best two of five flight)

1) C.M Kim	129	129	-	258
2) Don Bartick	120	122	-	242
3) Mike Jester	105	99	-	204
4) Don Brent	72	72	-	144
5) Richard Wood	56	82	-	138

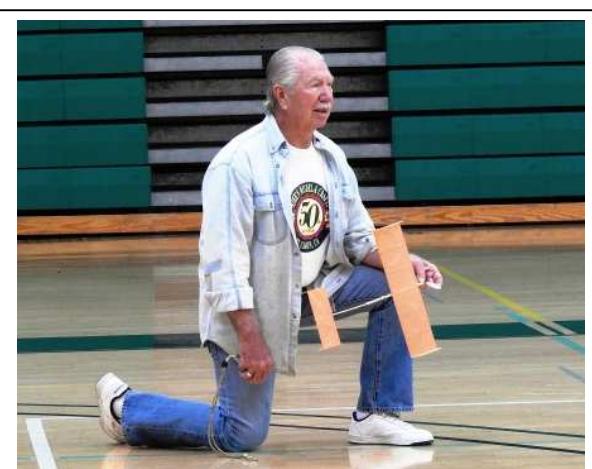

**A-6:**

(Best two of five flights)

1) C.M Kim	129	129	-	381
2) Richard Wood	169	183	-	352
3) John Hutchison	179	161	-	340
4) Greg Hutchison	152	158	-	310
5) Mike Jester	125	157	-	282
*) Don Bartick	91	DNF	-	91

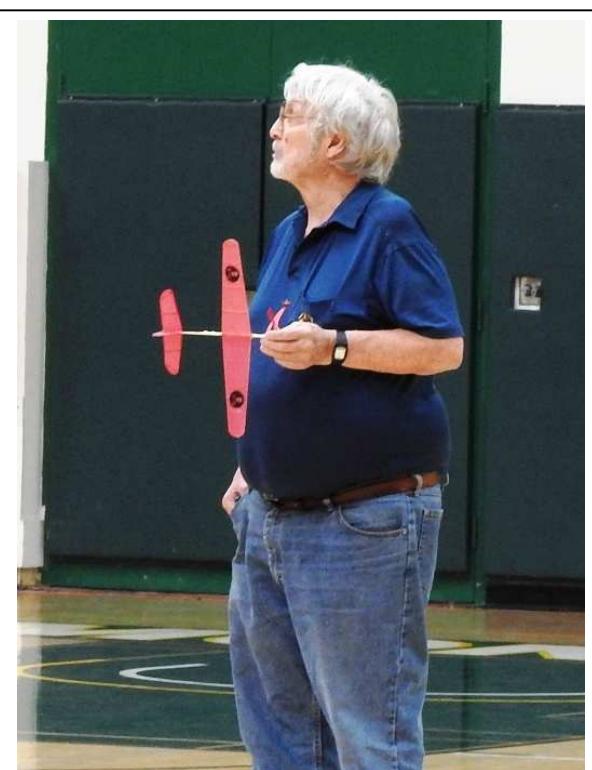

\*(non-conforming motor stick)

**Phantom Flash:**

(Scale Staffel Event)  
 (Best three of six flights)

1) Don Bartick	63	70	68	-	201
2) John Hutchison	59	59	65	-	183
3) Greg Hutchison	50	54	49	-	153
4) Richard Wood	27	33	73	-	133
5) Nick Panousis	25	26	25	-	76
6) C.M. Kim	37	20		-	57
7) Don Brent			DNF

## Locating Lost Models with a Drone

By Mike Jester

If you have been at this hobby for a few years you have undoubtedly lost a model and been unable to recover it. This typically happens when the model catches a thermal and/or the DT fails to trigger. Or you can simply fail to get a good line of sight. I have spent hours searching for lost models, sometimes with success and sometimes without. It takes me a considerable amount of time to build and trim a model, so I am particularly disappointed when my recovery efforts fail. Several years ago I purchased a Walston RF transmitter, receiver and Yagi antenna. I fly all my F1G models with a transmitter on board. Ditto for most of my P-30 models and my larger OTR models including my Gollwock and Jabberwock. This has greatly improved my chances of recovering them.

Recently I received an email from Bernie Crowe, a SCAMPS member. He was desperately seeking to recover his Gollywock at our Perris flying field. It had gotten lost in the tall weeds north of the flight line. Searching over two days had not produced his model. Bernie asked for everyone in the email chain to keep an eye out for his model. I replied that I was going to Perris shortly and would do so. Some fliers feel that so-called drones are the bane of our hobby. These aircraft are, in reality, RC quad copters that are purchased ready to fly. Unfortunately they are often used in the most sensitive areas, like National Parks, where they shouldn't be flown. These drones are, in my opinion, largely responsible for the FAA's push to require registration of model aircraft. Anyway, there is at last one good use of drones that was recently demonstrated. Shortly after receiving the panicked email from Bernie, I got a follow-up email from Bernie indicating that his Gollywock had been found by Hal Cover. Hal had expertly and diligently flown his video-camera-equipped quad copter in a search pattern over the area where Bernie's Gollywock was likely hiding. Once he found it, Hal let his drone hover in position, and walked directly to Bernie's model.

**Bernie Crow and Hal Cover with Recovered Gollywock at Perris, California**

## 2017 YTD OUTDOOR POINTS – M.Chomyn

### P-30

1st - Don Bartick (5 pts.)

2st - Mike Pykelny (4 pts.)

3rd – Mike Jester (2 pts)

## FROM THE WORKSHOP - M.Chomyn

Attached are photos of my progress on a Berkeley Culver V. I bought the plans and 1/32" print wood patterns on Ebay. You need to glue the 1/32 print wood to either a 1/32, 1/16 or 3/32 balsa wood backing sheet to get the correct parts thickness shown on the plans. As with any short kit you need to supply all the sticks and with this model the hefty nose block material.

I bought the short kit not only because it's cheaper than trying to get an original Berkeley kit but also because this was a model I got for my 12<sup>th</sup> birthday back in 1961. It was purchased at Community Drugs the local drugstore in Southwick Mass. The store normally sold plastic kits but they got a shipment of wood kits and the Culver V was one. The box art grabbed me and when I read 29-inch wingspan I was hooked. The kit cost only \$2.00. I think at that time Berkeley was going under and its kits were being offered at lower prices to clear inventory.

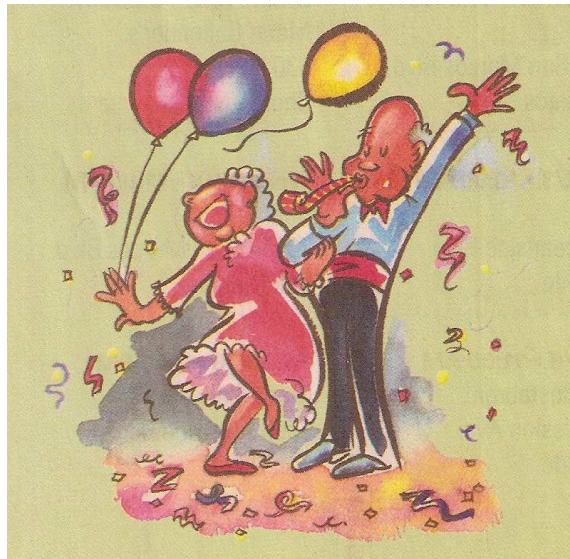

I recall I was able to build the rudder and stab. But I didn't make the rudder moveable by using the wire hinges shown on the plan. By the time I got halfway through the fuselage I gave up and never got to the wing. Which proved, that the writing on the box was correct, it definitely was "A Craftsman's Kit". And, at the age of 12, I was hardly a craftsman. But I always remembered the kit fondly with its huge plan and isometric construction details. When the short kit arrived, I opened the plastic sleeve and unfolded the plan and a rush of dormant memories hit me right between the eyes. There it was, and at the age of 68 with some building experience I was determined to get it built and even make it fly.

I was always of the opinion that Berkeley models were balsa barges and too heavy to fly very well. But the framework so far is not that heavy at 46 grams. But there's still the nose block to add and it's a lot of block. Won't be adding any landing gear, will build it with gear up as it had retracts. Will finish it with a two-tone yellow and blue tissue color scheme I saw on a website. I think it can handle an 8 or 9 inch plastic prop and 8-10 strands of 1/8" rubber about 18 inches long. It has a small amount of polyhedral in the wing, so I'm hoping that will have a positive effect on flight habits. Hope to get it finished in time for the first Scale Staffel contest in 2018.

Berkeley Culver V, 29 Inch Wingspan, Free Flight Model

# ORBITEER & SCALE STAFFEL ANNUAL BANQUET - JAN 27<sup>TH</sup>

## WHEN & WHERE:

Saturday, January 27<sup>H</sup> at 1:00 pm

GIOVANNI'S Restaurant  
9353 Clairemont Mesa Blvd.

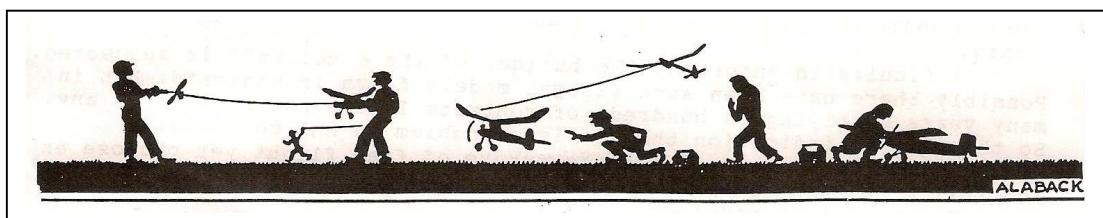

## WHAT & COST:

Italian Buffet, which includes:  
Salad, Spaghetti, Lasagna, Pizza,  
Garlic Bread, and Beverage.  
All you can eat for \$15, tax & tip included.

Come one come all, bring your appetite.

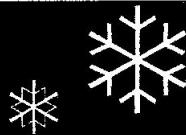

## THE PROGRAM:

Eat, Drink, and Enjoy  
Annual flying awards presentation  
Raffle, donations are welcome  
Sharing of tall tales and memories.

# The Isaacson winter classic
