NEWSLETTER OF SAN DIEGO ORBITEERS FREE FLIGHT CLUB

FEBRUARY 2021

## **Prez's Corner – Mark Chomyn**

It's that time of year when football fans suffer post-Super Bowl depression. For most, when your favorite sport goes off season you may feel a little down in the dumps and wish for next season. Or, spend a lot of time watching last season's highlights replayed on ESPN or other sports channels. But we free flight enthusiasts who live in southern California are lucky to have a season that allows us to pursue our sport/hobby year-round.

In a sense, our hobby is not only a sport but is also an activity that provides us a form of physical and mental therapeutic benefit. Ever notice how you seem to lose some tension when you go out to the field to fly? Doesn't that chase after a max flight seem like a pleasant stroll (especially with the plow-in of the mulch piles)? And doesn't it pick up the pulse rate a little when you come to the field with a new build and watch it fly rock steady right off-the-board? I can't imagine having to live without the ability to build and fly free flight model planes.

So, if you are looking for an excuse to go out and fly and experience the great benefits of our hobby/sport, don't pass up the Orbiteers February outdoor monthly on February 21st. Events will be coupe, glider and power. For those who like a good road trip there's also the Presidents Cup in Eloy AZ. Unfortunately, per the NFFS calendar, it's on the same day (Feb 21st) as the Orbiteers monthly so for some of us we'll need to decide which event we want to attend.

For myself, after having a mild bout with COVID-19, I can't wait to get out and fly. I got my first round of the vaccine on February 10th and will get my second round on March 3rd. After completing the vaccinations I'll be good to go and back out on the field in March. I'm going to try and get a new old time/nostalgia plane done for the March contest. The Miss Canada Sr. I usually fly is looking a little tired and I need a reason to get that increased pulse rate feeling I mentioned above. In the spirit of building something different I've got a Scientific Yellow Bird kit that I can copy the plan and parts from and avoid cutting up the original kit. See you in March.

Last month I mentioned that I was building an old Guillows profile model (Stormavik) and included a picture of the project in progress. Well, I finished the build as shown and I have to admit that: 1.) It looks a lot smaller than it did when I was 10 years old in 1959, 2.) It looks a lot better than the plane I built in 1959 and 3.) it will get flights of 10-15 seconds (about 10-15 seconds more than I got in 1959) on 300-400 hand winds of the six-inch long 3/32" Tan Super Sport rubber. Substituting a gray 4-3/4" Peck Polymers for the red Guillows prop really helps. Of course, knowing what a CG is and what it means in balancing a plane (didn't know that in 1959) also doesn't hurt. It was a lot of fun to get that nostalgic feeling with this simple build.

Oh, by the way, it is February and that means Valentine's Day. So, don't forget your significant other.

(Prez's Column from previous page) Especially if they accompany you to the field for moral support and know how to handle a stopwatch.  
Stay Healthy  
Mark

Flight Reservation Systems decide whether or not you exist. If your information isn't in their database, then you simply don't get to go anywhere. - **Arthur Miller**

## Building with Permanent Magnets on a Metal Building Board

By Mike Jester

Building balsa wood frames for model airplanes using magnets is an old idea. I remember Jerry Sullivan of the Scale Staffel FAC club in San Diego singing its praises to me many years ago. A rectangular piece of sheet metal serves as the building board. The plan for the model airplane is laid over the top of the sheet metal. Then the plan is covered with translucent non-stick parchment paper. This paper has sufficient transparency to allow you to see the lines on the plan. The balsa sticks, ribs, formers, etc. are held in position over the plan using magnets. Glue can be applied to these pieces before they are secured to the metal sheet with magnets, or after they have been aligned on top of the plan. This method of building balsa wood aircraft frames is much quicker and easier than the traditional technique of using a foam board and inserting pins to hold the balsa wood pieces.

### Coupe (F1G) Fuselage Side Under Construction on Metal Building Board Using Magnets

Pins should never be stuck through balsa parts as this will weaken them. The alternative is to lean the pins against the balsa parts as shown in the photo below. However, this can crease soft balsa and weaken the same. Some people pin balsa scraps against the framework but this is a tedious extra step. Most people use straight pins. Others use pins with specially shaped cylindrical plastic holders. I have a pin phobia. I don't relish being stuck in the finger with a pin.

### Straight Pins Leaning Against Triangular Stick-Built Balsa Wood Fuselage

Continued Next Page

You can buy a piece of sheet metal from HOME DEPOT or LOWE'S and cut it to the desired size. However, the sheet metal will end up with very sharp corners that need to be filed smooth. Cutting the sheet metal with tin snips can add curvature to the metal sheet, which then needs to be hammered out. You can also purchase suitable rectangular permanent magnets that measure 1 x  $\frac{3}{4}$  x  $\frac{3}{16}$  inches like those pictured below. These magnets are also relatively expensive when purchased from a hardware store.

You can save time and money by purchasing the Magna- Board™ system from Easy Built Models. I recommend the larger size sheet metal board that measures 13  $\frac{1}{2}$  inches x 32 inches. The sheet metal board is very flat and comes with nice beveled corners and smooth edges. Since the rectangular piece of sheet metal is flexible, you need to support it on a rigid flat surface. A thick piece of particle board will typically be very flat and can be used if your work bench or building table has a sagging curved surface. An added benefit of building with rectangular magnets is that you can stand them on their edges and they will hold fuselage sides, ribs, etc. perfectly vertical as shown in the picture below.

**Rectangular Magnets Holding Wing Ribs Vertical**

Don't cover the plan with clear plastic wrap as cyanoacrylate (CA) glue will strongly adhere to the same. Parchment paper has a Teflon coating or similar material that greatly lessens the ability of CA, Duco cement, Ambroid cement, white glue, etc. to stick to the same.

If you want to avoid the dreaded "banana boat" when building a mid-size or large box fuselage you may want to use some laser-cut plywood jigs. The picture below shows jigs of this type sold by Bob Holman being used to build a fuselage that is straight and square. While the jigs in this picture are bolted to a thick non-metallic building board, similar jigs are available from Retro RC Models that are configured to receive permanent magnets that hold the jigs on a metal building board.

### Plywood Jigs Being Used to Build a Straight and Square Box Fuselage

Building a fuselage with a round or oval cross-section, such as the fuselage of a scale WWII fighter, is a more complicated process. There are various methods for doing this, such as the keel method. Techniques for building non-square fuselages are beyond the scope of this article.

If you try building your balsa wood model airplanes with magnets on a piece of sheet metal, you will surely give up building your models using pins and a foam building board.

# SCAMPS & SCIFS Texaco

April 10th & 11th 2021 – Lost Hills, CA - A.M.A. Sanctioned Contest  
—Run in Conjunction with the San Valeers Club Annual—

Saturday: 7:30 AM to 4:00 PM. Sunday: 7:30 AM to 3:00 PM.

\*\*\*\*\* Any event can be flown on either day, do not have to finish same day! \*\*\*\*\*

## **.12 A Texaco**

(8cc fuel, best one of three official flights, 7:30 AM to 10:30 AM any glow IC engine .051 or smaller)

## **Gas Scale**

### **O.T. Small Rubber Fuselage**

(3-minute max)

### **O.T. Large Rubber Stick**

(5-minute max)

### **.020 Replica**

(Engine run is 12 sec. HL, 15 sec. ROG, 3 minute max)

### **Pee Wee Antique**

(2.2cc fuel, best of three official flights, any .024 or smaller IC engine)

### **\* \* 1/4 A Nostalgia**

\*\*\*OT HL/CL Glider can be launched overhand, discuss or catapult. No modifications can be made the plan form other than a hook added for catapult launch. Modifications for DT okay as long as plan form is adhered to. No Scaling. For Catapult launch, a 9" loop of 1/4" rubber may be used on a 6" stick (two 9" loops of 1/8" rubber may be used). Up to 9 launches for 3 two minute maxes. If you have 3 maxes, fly till you drop a flight.

\*\*All Nostalgia Events, (10 Second Hand Launch, 13 Second VTO or ROG, then 7&9 seconds), 3 minute Max

\*SAM Power events to be flown using SAM Rules, 20 Second engine run hand-launch, 25 seconds R.O.G. 5 Minute maxes (weather permitting). Rubber ties will be broken by increasing Max times (weather permitting)

\$5 entry per event. Cash prizes 1<sup>st</sup> through 3<sup>rd</sup>, \$5 for each person you beat in the event.

Subject: A Postal P30 Contest

To:

Cc:

Hi everyone,

A friend of many of us, Jim Moseley, is suggesting that - if there is enough interest - he will run a postal contest for P30s in 2021/2022. here is what he has suggested so far:-

*P30 Postal, anyone ?*

*With the widespread popularity of P30s I am wondering if there is interest and likely support for a Postal event for such and I ask your thoughts and opinions.*

*Balsa airframes, commercially available f/w props, no auto surfaces, 10g motor, etc. 2:00 Maximum, if three such achieved then ongoing 2:30 flyoff flights until that time not achieved.*

*Models to be flown any time within a given period, not necessarily all on same day. Entries can be made with as many models as you have. Some national rules specify 50g minimum weight, do those flying P30s to this loading find much performance difference to the 40g's? Any need for a "K Factor" to even things up?*

*Flying period ... example, May 1st. to April 30th allows flyers in both hemispheres to fly in summer conditions – but is a year too much to maintain interest? Suggestions ? Any flyers south of the Equator? Scores, photos, anecdotes emailed to organiser (me!). Prizes ... just the accolade of fellow enthusiasts, unless a sponsor appeared upon the scene.*

*Am seeking opinions and suggestions pertaining to above details; please email me by month end at [jimoseley@look.ca](mailto:jimoseley@look.ca)*

I have suggested that the period could be August 1st 2021 to February 1st 2022. That way those in the Northern climes would have late Summer and Fall - into Winter, and those in Southern climes would have late Winter and Spring - into Summer. Both would get about 2 months of flying weather, maybe more if they were lucky. Those close to the equator probably don't care what time of year it is. What about multiple entries with the same model? How about similar events for other models?

**Even if you personally don't have an interest, would you pass this on to as many as you can, in as many far flung parts of the world as you can. Let's see what interest there is - Jim's email address is in the quoted section above. Even if this misses Jim's deadline I'm sure he would appreciate all the input he gets.**

Thermals Roy

## From the Workbench - John Merrill

I'm still a bit amazed what can be done when you are under Stay At Home Orders. I still maintain I'm a very slow builder, but I've finished up another plane. This one is an older Gallows' kit, the DHC-1 Chipmunk, which took a couple of weeks to complete. Most builders would have had it done in a couple of evenings. I'm not positive, but I think I may have picked it up at one of our Annual Banquet raffles a few years ago or so.

Unfortunately, I built it to match the picture on the box, and with the all gray tissue I don't think it's all that attractive. I had a lot of problems with the included decals, but overall it went together pretty easily with just a few modifications. I had to look up the registration that the decals depict, turns out VT is the registration of India.

I've been informed this week that I return to work in a few weeks, or at least pick up a few more hours, so my building may get even slower. In the meantime, I'll work on figuring out my next project.

So, what's on your workbench?

## From the Workbench - Roger Willis

**Howdy Squadron...** I just finished my MISS WORLD'S FAIR. It came out a bit heavy at 39g and will be powered by 4s X 1/8 X 30". The graphics are in RAMOS font that Callie designed for Fernando. CG flights to come at my small park soon.... Many Maxes r

## **SPECIAL INSTRUCTIONS**

**(LOST HILLS FF MODEL AIRFIELD ASSOCIATION CARD REQUIRED (\$25 AT FIELD TO JOIN)**

### **SATURDAY NOON to 1 PM LUNCH BREAK & SUNDAE SOCIAL**

The contest will be suspended for 1 hour for lunch and the San Diego Orbiteers famous ice cream social. This is a great time to relax, cool off, have lunch and enjoy the ice cream sundaes. We will provide ice cream, & sundae fixings, napkins, plates and plastic ware.

### **PRIZE DRAWING**

The Fresno GMC once again has collected an enormous amount of model stuff for their drawing. For up to 3 events entered that are sponsored by them, the contestant will receive a drawing ticket. Drawing to be held right after Sunday's award ceremony.

### **BILL BOOTH, SR. MEMORIAL**

High time in Old Time Gas. Includes 020 Replica, but not Texaco. Winner will receive a special award from the Fresno GMC.

### **HAND LAUNCH GLIDER & CATAPULT GLIDER**

Hand Launch Glider & Catapult Glider will be launched from an established glider pen on the field. Max's are 120 seconds and all flights count.

### **NIGHT GAS FLYING**

All engine classes combined. Event window between 6:30 pm – 9pm. Engine runs in accordance with aircraft classification; i.e., AMA or Nostalgia.

### **FAI EVENTS**

F1A, F1B, F1C: 8am start time. Seven (7) one hour rounds. 240 second first round, 180 seconds, rounds 2-7. Round 5 starts at 1pm due to lunch break/ice cream social. Fly-offs starts no earlier than 4:30pm.

F1G, F1H, F1J, F1S: 8am Tiebreaker, no max. 15 min window. Not a regular round flight. 8:30 am start of regular rounds. Five (5) 1 hour rounds, 2 minute max. Fly-offs start at 1:30pm. Two (2) fly-offs, 3min & 4 min. If no winner, revert to morning tiebreaker flight.

### **VINTAGE FAI POWER**

For rules, please go to this website: <https://freeflight.org/wp-content/uploads/2020/12/NFFS-Competition-Rules-2021-2022-Release-3.pdf> A copy of the rules will be available at the CD's table. *First five (5) flights must be flown from the established line between 7:00 – 12:00 AM.*

### **DAWN P-30**

Saturday morning 7:30 AM sharp. Mass launch from glider pen; 1 flight, no max.

### **DAWN MULVITHILL (Timer can ride with contestant)**

Sunday morning 7:30 – 7:50 AM launch window, 1 flight, no max.

### **TWIN PUSHER MASS LAUNCH**

Saturday morning 8:30 sharp. Mass launch from glider pen; 1 flight, no max.

### **GOLLYWOCK MASS LAUNCH**

Sunday morning at 8:00 sharp. Mass launch from glider pen; 1 flight, no max.

### **TEXACO (Timer can ride with contestant)**

1/2A Texaco: Saturday 7:00-10:00 AM launch window, 8cc fuel; Full Size Texaco: Sunday 7:00-10:00 AM launch window,  $\frac{1}{4}$  oz per pound – max 1.75 oz fuel.

### **1/2A GOLDEN AGE**

Open to any free flight design that had plans published or dated from 01/01/1957 thru 12/31/1969. Engines are restricted to Holland Hornet

.049/.051 and Cox T.D..049/.051. Although an electric version is included in the provisional rules, electric is excluded from this event. No V.I.T., auto surfaces or auto rudders allowed even if on the original plan. Engine runs are: Cat II) Hand launch 12 sec/VTO 15 sec for first 3 official flights; fly-off flights are 8 seconds. Flight maximum is 180 sec.
